DETAILED ACTION

Allowable Subject Matter

1. Claims 37-38, 40-55, 57-72, 74 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 37, 74, and their dependants thereof, are allowed because the closest prior art, Dennis (US Patent No. 6,542,733) discloses system and method for controlling personal telephone number dialing lists and dialing capabilities for user enter telephone numbers into a profile list and specify any desired special handling or routing operations for future calls to each number where the personal profile information is stored on an service control point or database that is accessible to the wireless telephone network, then the wireless network adds any other required digits such as country, area or local exchange code, Rogers (US Patent No. 6,360,108) discloses system and method for the automatic pre-pending of digits in a wireless communication device where device contains a prefix storage area containing one or more prefixes that may be automatically pre-pended to a destination telephone number that selected prefixes to the user entered destination telephone number, either alone or in combination, fail to disclose a terminal for telecommunications networks, comprising at least a storage area for storing user identifiers and acting as an electronic

address book, and processing capacity for processing the user identifiers stored in said storage area, said processing capacity being configured for modifying the user identifiers by including an identification code of an operator selected by a user of the terminal or at least one of a country prefix and a local prefix and organizing said user identifiers selectively in one of a plurality of configurations, said plurality of configurations comprising at least a first and a second configuration, wherein said first configuration comprises the user identifiers organized with the insertion of the identification code of the operator selected by the user of the terminal, wherein said second configuration comprises the user identifiers organized with the inclusion of at least one of the country prefix and the local prefix, wherein the modified user identifiers are stored in the terminal, and wherein the terminal can receive from the user of the terminal information relating to a location of said terminal and said processing capacity is configured for switching said user identifiers between said first configuration and said second configuration following the receipt of the information.

Claim 54, and their dependants thereof, are allowed because the closest prior art, Dennis (US Patent No. 6,542,733) discloses system and method for controlling personal telephone number dialing lists and dialing

capabilities for user enter telephone numbers into a profile list and specify any desired special handling or routing operations for future calls to each number where the personal profile information is stored on an service control point or database that is accessible to the wireless telephone network, then the wireless network adds any other required digits such as country, area or local exchange code, Rogers (US Patent No. 6,360,108) discloses system and method for the automatic pre-pending of digits in a wireless communication device where device contains a prefix storage area containing one or more prefixes that may be automatically pre-pended to a destination telephone number that selected prefixes to the user entered destination telephone number, either alone or in combination, fail to disclose a terminal for telecommunications networks, comprising at least a storage area for storing user identifiers and acting as an electronic address book, and processing capacity for processing the user identifiers stored in said storage area, said processing capacity being configured for modifying the user identifiers by including an identification code of an operator selected by a user of the terminal or at least one of a country prefix and a local prefix and organizing said user identifiers selectively in one of a plurality of configurations, said plurality of configurations comprising at least a first and a second configuration, wherein said first

configuration comprises the user identifiers organized with the insertion of the identification code of the operator selected by the user of the terminal, wherein said second configuration comprises the user identifiers organized with the inclusion of at least one of the country prefix and the local prefix, and wherein the modified user identifiers are stored in the terminal, and wherein said processing capacity is configured for generating said user identifiers organized in one of said at least the first and at least the second configuration by means of an if/then mechanism, in which the if function identifies at least one value selected from the group of: a number of digits included in the user identifiers to be organized, and the digits present in specified positions of said user identifiers to be organized.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
